

# ScanRouter™ V2 Professional

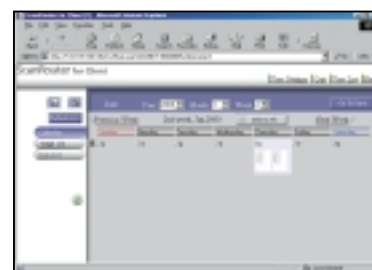

Most documents are still paper-based, so they cannot be searched digitally. Scanning a document turns it into a digital format and allows you to process it. Scanning hundreds of documents a day is a time-consuming and tedious process, unless you use ScanRouter™ V2 Professional. Ricoh's easy-to-use and powerful imaging software enables users to digitise documents centrally and manage them locally. ScanRouter™ V2 Professional is web browser enabled and allows users to pull in digitised documents as e-mail attachments or hyperlinks. The ScanRouter™ V2 Delivery Server is the temporary central repository for imaged documents from where they can be distributed to those users who need them. ScanRouter™ V2 Professional is the first step towards full document management and frees users from manual distribution.

*Received documents are digitally distributed in- and outside the network via different methods.*

## Highlights

- Scans and stores centrally and distributes to clients automatically
- Web-enabled
- Pull-in capability via e-mail, to webpage, file, or folder
- Supports TIFF, PDF, JPEG and fax data format

*Documents can be shown by their storage date to facilitate their retrieval.*

## Solution for:

- General offices
- Banks
- Insurance companies
